

HEAT TRANSFER PRINT ON SLATE

The Slate Collection is a soft, fine grained, deep gray stone that offers a dramatic background for heat transfer printing. This rustic substrate offers excellent opportunities for those unique projects that can set you apart from the crowd.

Fabrication Process

- Preheat Insta 288 heat press to 300°F.
- Print image onto Joto hard surface paper. (White toner set to 150%)
- Cut individual images out from the transfer sheet.
- Center image over top of slate material. Cover slate and transfer with a piece of silicon tissue paper.
- Place green foam heat pad on top of silicon tissue paper.
- Press in the heat press at 330°F for 180 seconds (3 min.) using heavy pressure.
- Lift heat press and remove slate and all components from the press.
- Allow slate to sit with transfer paper intact for at least 10 minutes to cool to room temperature. Larger pieces of slate may take longer to cool.
- When slate is cooled to room temperature, remove transfer paper from surface.

Note: Process noted above are intended as safe guidelines and may need minor adjustments to achieve optimal results.

Clean Up

- When cooled, gently wipe with soft damp cloth.
