Hotronix®

## Product Benefits

**Patented over-the-center pressure adjustment for even, edge-to-edge heat and pressure regardless of substrate thickness.**

This ensures that the heat and pressure needed is evenly distributed to the substrate. Uneven heat and pressure can lead to failed transfer or a ruined substrate.

**Smooth-shock opening.**

This allows for easier end-user operation so that the top platen doesn't release too quickly, which could lead to issues in the final product.

**Coated non-stick heat platen.**

Customers can ensure that transfers and substrates do not adhere to the heat platen after pressing, which could damage both the transfer and the substrate.
